A General Provisions Non-Display Price List

For the Usage Type Non-Display Data Usage, the stated fees in the Price List are to be paid by the Customer.

All prices stated are before value-added tax (VAT).

Information Products are colour-coded to highlight their quality levels. The differences between these levels are set out in the following table.

Granularity

Premium	<ul style="list-style-type: none"> ▪ Real-Time Analytics ▪ Information Products with the most granular order book data ▪ Lowest latency
Ultra	<ul style="list-style-type: none"> ▪ Advanced Information Products ▪ Un-netted pre-trade ¹⁾ and trade data ▪ Very low latency
Core	<ul style="list-style-type: none"> ▪ Regular Information Products ▪ Netted pre-trade ¹⁾ and un-netted trade data ▪ Low latency
MiFiD II – Disaggregated Information Products	<ul style="list-style-type: none"> ▪ Information Products offered by Deutsche Börse AG relating to Art. 10 of Delegated Act (EU) Number 2017/567

1) Netted pre-trade information provides bids and offers at specified time intervals; un-netted pre-trade information provides all bids and offers (up to the pre-defined order book depth) as soon as they occur.

Deutsche Börse AG reserves the right to change content and prices of the Information Products in accordance with the Non-Display Agreement.

A description of the respective Information Products is available at www.mds.deutsche-boerse.com.

If licensed Information is directly or indirectly procured via Deutsche Börse AG's CEF® Core Multicast Systems, the content of the Information Products may be limited.

B Non-Display Data Usage

B.1.1 General Provisions Non-Display Data License Fees

The Non-Display Data License Fees are billed on the basis of the following Customer Categories (in accordance with Section A para. 1), which are determined through the intended scope of use:

- (i) Trading as Principal,
- (ii) Brokerage,
- (iii) Trading Platform,
- (iv) Index Calculation and
- (v) Other Application Usage.

The term 'trading based activities' comprises of the Customer Categories (i) to (iii). The term "other activities" comprises of the Customer Categories (iv) and (v). The scope of usage covered within the Customer Categories is described in detail below.

The Market Data Fees for the Non-Display Data Licenses applicable to trading based activities depend on the number of Devices, which use Information for Non-Display purposes according to the definition in Section 1 of the General Terms and Conditions to the Agreement on Non-Display Data Usage. This is subdivided in four price levels:

- Entry: 1–5 Devices,
- Medium: 6–10 Devices,
- Plus: 11–30 Devices,
- Unlimited: if > 30 Devices or the number of Devices cannot be controlled or specified or only the unlimited price level is available.

Fees for trading based activities are determined by a tiered model:

- Tier 3 (lowest level): Trading as Principal or Brokerage
- Tier 2: Trading as Principal and Brokerage, and
- Tier 1 (highest level): Trading Platform

Each higher level includes the Usage of the lower levels. For each Tier the price levels depending on the number of devices used (Entry, Medium, Plus, Unlimited – see above) apply. Billing will be rendered based on the relevant Tier and price level whereas the total number of Devices for each Customer Category included shall be aggregated. Details are described below.

Fees for other activities are determined by the following Customer Categories without differentiation regarding the number of devices used:

- Index Calculation, and
- Other Application Usage.

Alternatively to a billing based on different Customer Categories, Tiers or number of Devices, also a lump sum (Enterprise License) is available, which comprises all available Customer Categories for one Information Product with unlimited scope of use regarding Devices used (see Section B.3 Non-Display Enterprise License Fees).

Non-Display Data License Fees apply once per Customer per licensed Information Product with the highest granularity level and per category (see above) per month if not otherwise specified and shall be remunerated cumulatively if not otherwise specified.

B.1.2 Customer Categories and Unit-of-Count Devices

The following description provides further details of the Customer Categories and respective counting of Devices applicable for the Non-Display Data Fees.

Trading based activities

Examples of 'trading based activities' include semi-automated or automated order/quote generation, order pegging, price referencing for trading purposes, smart order routing to facilitate trading, order management, execution management, market making, 'black box' trading, algorithmic trading, program trading and the operation of trading platforms as well as quoting and trading of financial derivatives (including but not limited to futures, options, warrants and certificates linked to the respective underlying market data).

The following Customer Categories are relevant for trading based activities:

(i) Trading as Principal

The Customer Category Trading as Principal refers to proprietary trading activities (i.e. trading in own name and for own account; "Trading as Principal"). It includes algorithmic and/or automated and/or semi-automated order generation, automated execution management and/or automated quoting as part of market making and instrument pricing (e.g. as part of derivatives issuance and trading) for the purpose of trading in one's own name. Trading as Principal does not include the completion of trades on behalf of Customer's clients even if Customer is using its own inventory. Such usage is included in Customer Category "Brokerage". E.g. the Customer Category Trading as Principal does not entitle Customers to grant third parties access for activating algorithmic orders and/or accessing APIs capable of receiving order messages from third parties. Non-Display License Fees are charged on a per Information Product basis according to the total number of Devices which have access to Information. Whenever a Device has the possibility to access Information simultaneously for the Customer Category "Trading as Principal", each possible access shall be counted as a Device.

(ii) Brokerage

The Customer Category Brokerage refers to brokerage activities and the facilitation of client trading activities (i.e. trading in another's name for the account of others or trading in own name for the account of others (brokerage business); "Brokerage"). It includes but is not limited to automated order generation and execution management for clients (e.g. smart order routing) as well as the provision of access for clients to functions augmenting the user's trading activities and/or algorithmic trading tools (e.g. generation of child orders based on parent orders). Non-Display License Fees are charged on a per Information Product basis according to the total number of Devices which have access to Information. Whenever a Device has the possibility to access Information simultaneously for the Customer Category "Trading as Brokerage", each possible access shall be counted as a Device. This includes every technical or manual access (including trade message access point) for clients who can activate algorithmic orders and/or access APIs capable of receiving order messages from third parties. Each of these accesses shall be counted separately as an additional Device.

(iii) Trading Platform

The operation of a trading platform, i.e. organising a market (irrespective of whether buy-side and sell-side interests are brought together on a bilateral or multilateral basis), establishes a single Customer Category ("Trading Platform"). In particular, this includes operating an exchange, a multilateral trading facility ("MTF"), an organized trading facility ("OTF") or comparable alternative trading system, performing systematic internalization ("SI") as well as the offering of so-called broker crossing networks, multi-dealer platforms or dark pools. For the avoidance of doubt, the operation of a Trading Platform according to third country provisions (e.g. based on the US Regulation NMS or Regulation ATS) is also subject to this provision. Non-Display License Fees are charged on a per Information Product basis according to the total number of Devices which have access to Information. Whenever a Device has the possibility to access Information simultaneously for the Customer Category "Trading Platform", each possible access shall be counted as a Device.

Other activities

The following Customer Categories are relevant for other activities:

(iv) Index Calculation

The Customer Category Index Calculation refers to the Non-Display Data Usage for the purpose of administration including calculation and dissemination of an index / a benchmark or several indices / benchmarks ("Index Calculation"). This Non-Display Customer Category addresses the administrator who has control over the provision of the index or benchmark. It does not address Non-Display Data Usage on behalf of a third party, such as the index calculation as a calculation agent with or without being the administrator for such an index or benchmark. In cases where an index or benchmark is being calculated on behalf of a third party that third party is subject to the licensing requirement.

Deutsche Börse AG determines whether an index or benchmark is calculated on behalf of a third party by taking into consideration the specific circumstances of the case, e.g., whether

- Some or all intellectual property rights of the index or benchmark belong to the third party, and/or
- The calculation agent is commissioned by a third party for the calculation of an index or benchmark, and/or
- The third party delivers the index methodology which needs to be applied by the calculation agent.

(v) Other Application Usage

When licensing this category, Customer is entitled for Non-Display Data Usage for other purposes than trading based activities and/or Index Calculation. This includes, but is not limited to the following usages: risk management, profit and loss calculation, portfolio valuation, quantitative analysis, fund administration, fund accounting, portfolio management or instrument pricing. It does not include the execution of Non-Display Data Usage by the Customer as a calculating agent on behalf of a third party. This means where derived data (e.g. iNAV's) are calculated on behalf of a third party and some or all of the intellectual property rights in the underlying product (e.g. an ETF) will vest in that third party, the third party is subject to a Non-Display Data Usage license for Other Application Usage.

B.1.3 Tiered fee model for trading based activities

The following description provides further details of the tiered model that determines the Non-Display License Fees for trading based activities:

Tier 3 – Trading as Principal or Brokerage

Tier 3 of the Non-Display Data License Fee applicable for trading based activities requires the selection of a license for either the Customer Category

Trading as Principal, **or**
Brokerage.

The license and the total number of Devices refers only to the selected activity.

Tier 2 – Trading as Principal and Brokerage

Tier 2 of the Non-Display Data License Fee applicable for trading based activities includes the license for the Customer Categories

Trading as Principal, **and**
Brokerage.

Thus, the total number of Devices for each Customer Category included shall be aggregated. Non-Display Data License Fees for Tier 3 do not apply if Non-Display Data License Fees for Tier 2 are paid.

Tier 1 – Trading Platform

The category Tier 1 includes Non-Display Data Usage for the Customer Categories

Trading Platform, **and**
Trading as Principal, **and**
Brokerage.

Additional Non-Display Data License Fees for Tier 2 and Tier 3 do not apply if Non-Display Data License Fees for Tier 1 are paid. The total number of Devices for each of the Customer Categories applicable shall be aggregated.
